Bristol Myers Squibb Announces Opdivo (nivolumab) plus Chemotherapy and Opdivo plus Yervoy (ipilimumab) Demonstrate Superior Survival Benefit Compared to Chemotherapy in Unresectable Advanced or Metastatic Esophageal Squamous Cell Carcinoma

This material is intended to notify the press release issued on April 8 (local time) by Bristol Myers Squibb, our license partner for Opdivo.

Please click <https://www.bms.com/media/press-releases.html> for the original press release.

About Opdivo

Opdivo is a programmed cell death-1 (PD-1) immune checkpoint inhibitor that is designed to uniquely harness the body's own immune system to help restore anti-tumor immune response by blocking the interaction between PD-1 and its ligands. By harnessing the body's own immune system to fight cancer, Opdivo has become an important treatment option across multiple cancers since the approval for the treatment of melanoma in Japan in July 2014. Opdivo is currently approved in more than 65 countries, including Japan, South Korea, Taiwan, China, the US and European Union.

About Approval Status of Opdivo in Japan

In Japan, Ono Pharmaceutical Co., Ltd (ONO) received an approval of Opdivo for the treatment of unresectable melanoma in July 2014 and launched Opdivo in Japan in September 2014.

Thereafter, ONO received supplemental approval for additional indications of unresectable, advanced or recurrent non-small cell lung cancer in December 2015, unresectable or metastatic renal cell carcinoma in August 2016, relapsed or refractory classical Hodgkin lymphoma in December 2016, recurrent or metastatic head and neck cancer in March 2017, unresectable advanced or recurrent gastric cancer which has progressed after chemotherapy in September 2017, unresectable advanced or recurrent malignant pleural mesothelioma which has progressed after chemotherapy in August 2018, and microsatellite instability high (MSI-High) unresectable advanced or recurrent colorectal cancer that has progressed following chemotherapy, and unresectable advanced or recurrent esophageal cancer that has progressed following chemotherapy in February 2020 (Currently approved for 9 types of cancers).

In addition, ONO is conducting clinical development program including esophago-gastric junction cancer, hepatocellular carcinoma, urothelial cancer, ovarian cancer, bladder cancer, prostate cancer, pancreatic cancer, biliary tract cancer, etc.
