Four-Year Data Continue to Show Superior, Long-Term Survival Benefit with Opdivo (nivolumab) Plus Yervoy (ipilimumab) in Patients with Previously Untreated Advanced or Metastatic Renal Cell Carcinoma

This information is intended to notify the press release issued on September 17 by Bristol Myers Squibb. Please click <https://www.bms.com/media/press-releases.html> for the original press release.

First paragraph extracted from the original press release:

(PRINCETON, NJ, September 17, 2020) – Bristol Myers Squibb (NYSE: BMY) today announced that more than half of advanced renal cell carcinoma (RCC) patients treated with the *Opdivo*[®] (nivolumab) plus *Yervoy*[®] (ipilimumab) combination were alive after four years across the entire study population of the Phase 3 CheckMate -214 clinical trial. With the longest follow-up for an immunotherapy-based combination in previously untreated advanced RCC, *Opdivo* plus *Yervoy* continued to show superior, long-term overall survival (OS) and durable responses compared to sunitinib. These sustained benefits were observed across both the primary patient population, those with intermediate- and poor-risk prognostic factors, and in the intention-to-treat (ITT, i.e. all randomized) patient population.

About Opdivo

Opdivo is a programmed cell death-1 (PD-1) immune checkpoint inhibitor that is designed to uniquely harness the body's own immune system to help restore anti-tumor immune response by blocking the interaction between PD-1 and its ligands. By harnessing the body's own immune system to fight cancer, Opdivo has become an important treatment option across multiple cancers since the approval for the treatment of melanoma in Japan in July 2014. Opdivo is currently approved in more than 65 countries, including Japan, South Korea, Taiwan, China, the US and European Union.

In Japan, ONO launched Opdivo for the treatment of unresectable melanoma in September 2014. Thereafter, Opdivo received an approval for additional indications of unresectable, advanced or recurrent non-small cell lung cancer in December 2015, unresectable or metastatic renal cell carcinoma in August 2016, relapsed or refractory classical Hodgkin lymphoma in December 2016, recurrent or metastatic head and neck cancer in March 2017, unresectable advanced or recurrent gastric cancer which has progressed after chemotherapy in September 2017, unresectable advanced or recurrent malignant pleural mesothelioma which has progressed after chemotherapy and adjuvant treatment of melanoma in August 2018, and microsatellite instability high (MSI-High) unresectable advanced or recurrent colorectal cancer that has progressed following chemotherapy, and unresectable advanced or recurrent esophageal cancer that has progressed following chemotherapy in February 2020.

In addition, ONO is conducting clinical development program including esophago-gastric junction cancer, small cell lung cancer, hepatocellular carcinoma, glioblastoma, urothelial cancer, ovarian cancer, bladder cancer, pancreatic cancer, biliary tract cancer, etc.
